

As a movie enthusiast, after performing a search for movies, I want to be able to view a list of recommended movies so that I can easily find new movies to watch.

When I view the list of recommended movies, I want to be able to click on each movie to view a detailed description including the plot, genre, actors, and rating. This will help me determine if the movie is something I'm interested in watching.

Once I have found a movie that I want to watch, I want to be able to add it to my watch later list so that I can easily access it in the future. This will save me time from having to search for the movie again.

Additionally, I want to be able to like or dislike each movie by clicking a thumbs up or thumbs down icon. This will help the system learn my preferences and recommend better movies in the future.

If I encounter any issues while using the recommended movies feature, I want to be able to access a helper page with instructions on how to troubleshoot common problems.

When everything goes right, I can easily find and add movies to my watch later list while also providing feedback on my movie preferences. This feature will enhance my movie watching experience by suggesting new movies that align with my interests.
